TST600	For large container trees approx 10cm diam 6/8mm wire	1x50

The TREE SUPPORT TIE is designed to support and protect the tree when grown against steel, nylon wire and non slip cord. The tie acts as a cushion by the nature of the soft synthetic rubber material and design. For the TST300, 400 and 600 lift upwards the hinged centre block, position the support wire underneath and into the two grooves either side.

Bring the two straps round the tree and tighten each one, so the whole tie self grips. When the tie is tightened it self grips and does not slip along the wire or cord. For the TST200 just wind it onto wire and tie onto tree.

The tree is held firmly and it does not suffer any damage to the bark. The tie is soft, strong, black and UV protected.

NEW FOR 2018

VERTICAL PLANTER SYSTEM

The Vertical Planter System is a self watering wall planter. It is 46cm long. Plants can be placed in their pots (up to 12 cm) or planted directly into compost using the planting tray.

The roots are kept constantly damp by the reservoir of water in the base. Running an irrigation pipe along the top row of planters, the water flows into them and then when reservoir is full overflows to the one below.

The planters are designed to be easily applied to walls in a variety of methods. They can be clipped securely onto 50 mm welded mesh or screwed onto vertical or horizontal wooden laths.

Designed to be spaced 20cm above each other leaves plenty of space for plants to grow and hide the planter.
